Hi,

Regarding the Amiga OS 3.2 Full Version (incl Update 2) – CD Rom, with Kickstart ROM means physical chip or a rom file burnt to a CD? I guess I don't need a CF card since I'm using an emulated Amiga right?

--
Thanks

Nenad

Hi Nenad,

„with Kickstart Rom" means a physical Rom for a physical Amiga Computer. If you are using just WinUAE or similar you can use the Kickstart Rom Image on the CD Rom. The CF card has a bootable basic Image for physical Amiga Computers (600+1200) installed. This you can also download from our website after purchasing the CD Rom.

So if you are using just WinUAE you can just buy the CD Rom.

Best, Peter

Hi Nenad,

thanks for ordering with us.

This is an extract from the manual:

If you "only" bought the original Amiga OS 3.2 CD from us, please register it with the license code from the invoice. Please do not throw this away under any circumstances. This is the only proof of license! You can register your license at https://www.hyperion-entertainment.com/ where you can also download the updates to Amiga OS 3.2.1 and Amiga OS 3.2.2 after registration.

Alternatively, you can also find them on our website at

---

https://www.retrobuddys.com/download/Update3.2.1.lha and https://www.retrobuddys.com/download/Update3.2.2.lha and https://www.retrobuddys.com/download/Hotfix3.2.2.1.lha

For a fresh installation you should first install Amiga OS 3.2, then update 1 to 3.2.1 and only then update 2 to 3.2.2. Finally you can install the hotfix.

If you have also received the CF adapter and the 4GB CF card from us, please note that a minimal OS 3.2.2 is installed on the CF card for maximum compatibility and therefore also works in an Amiga 600 with 2MB chip RAM. If you have more memory you can also use the Glow Icons. You can find an image with 3.2.2 and CD and updates on our website at: https://www.retrobuddys.com/download/wb32_a600_glow.zip (The image is approx. 2GB in size).

You can find the standard 3.2.2.1 image at https://www.retrobuddys.com/download/wb_3221_clean_small.zip

You need to use WinImager to burn the Image to a CF Card => https://win32diskimager.org/

Your license code will be: 16T4X4N9N4-9PK9CZ97RB-HVY9B71GG

Hope this helps to bridge the time until you get the CD delivered. Unfortunately we can not put the CD Rom Image for download on our website.

Best, Peter
